

KEMSEEL

Apply to fresh wounds directly after pruning or cutting by means of a brush or pad. After application the product must have sufficient time to dry thoroughly before rain falls otherwise it will wash off. It is good practice not to prune in rainy weather. Brushes and pads should be thoroughly washed in cold water after use.

A protective compound for the sealing of pruning wounds in deciduous fruits.

'n Beskermmiddel vir die verseëling van snoeiwonde by sagtevrugte.

Dien toe op vars wonde direk na snoei of sny deur middel van 'n kwas of spons. Na toediening moet daar genoegsame tyd verloop voor reën val sodat die produk deeglik kan droog word andersins kan dit afspoel. Dit is goeie praktyk om nie in reënweer te snoei nie. Kwaste en sponse behoort na gebruik deeglik in koue water gewas te word.
